MODEL 545 & 747 SERIES

BEST PRODUCTS, BEST LOCAL SUPPORT

Sewer Equipment Company of America built its first 747 Trailer Jet with a rotating hose reel in 1993. Throughout its evolution, the 747 series of jetters has been the industry standard by which others are judged. Whether it is longevity, operator safety, overall value or available options that you are looking for, the current offering of 747 trailer and truck jets are without peer in the marketplace.

Longevity starts with choosing the proper components and continues with meticulous design and assembly. With Caterpillar engines and F.E. Myers pumps as standard equipment, users are assured of a vast support network and the utmost performance and reliability for the life of their system. Frames made of fully welded ¼" x 2" x 6" steel tubing maximize strength and corrosion resistance, and every trailer is certified by the National Association of Trailer Manufacturers, assuring you of adherence to all Federal D.O.T regulations and safety standards.

While our stout frames limit flex and sway while towing, our available Duraprolene water tanks are fully baffled to eliminate surging while stopping and turning with a load of water. Once on the job, our standard rotating safety reel allows the operator to position the trailer in the safest possible manner while simply rotating the reel to conveniently face the access point. The NEMA 4 water-tight control panel swivels with the reel to allow safe access regardless of reel position.

Our unique ECO operating system allows the engine to run at a 33% lower RPM than traditional designs, saving you operating 33% lower RPM than traditional designs, saving you operating costs on fuel every day and creating a safer and more pleasant work environment for your operators. Long term value is also created with design features like a welded, one piece enclosure and components that are painted prior to assembly to eliminate points of corrosion.

Any machine requirements necessary to get your job done, a 747 can be built to meet it. If a truck is more suited to your application, the 747 is offered to mount on your chassis or a factory provided unit with up to 3,000 gallons of water capacity. When truck mounted, power can be delivered by an auxiliary engine or via PTO hydrostatic drive from the chassis' power plant. Budget minded customers can look to the 545 series, which has the same construction features of the 747, but is without an engine and pump enclosure, or with engine enclosure only. Additional machine options include various pump configurations, wireless and tethered remote controls, tool storage, dual reels, safety lighting, integral CCTV system and more!

ONE PIECE ENCLOSURE: Our one piece enclosure is designed to maintain its cosmetic and functional integrity throughout the life of your equipment. While most manufacturers bolt individual panels together to achieve its purpose this practice leads to rusting panels, missing fasteners and overall degradation of the equipment. In addition to the structural and cosmetic integrity, these enclosures function to maintain temperatures above freezing in most conditions. With steel or aluminum available as materials of construction, as well as the 80,000 BTU heater or various types of insulation packages, our units are designed for the harshest weather and road conditions.

manufactures choose to build using plastic, however at Sewer Equipment, we offer trademarked DURAPROLENE tanks. Unlike typcial "poly" materials of construction that are rotational molded and non-repairable, our DURAPROLENE material can be repaired long after the warranty has expired. In addition, our design is fully baffled, yielding dramatically improved stopability. It is UV stabilized for protection from the sun and the surface is textured to provide a long lasting finish that will withstand the test of time and keep your unit looking first rate long into the future.

BOX TUBE FRAME: As we all know, a steel box tube cross section is stronger than a "C" channel cross section. However, tube construction also costs more money. While this is indeed true, it also leads to a stronger and longer lasting frame designed to withstand the strenuous rigors of any application you throw at it. It is for this reason we utilize this concept in all our products and provide our customers with the best value in the market.

NEMA 4 WIRING: Moisture can cause havoc on electrical systems which is why we choose to protect our electrical systems with NEMA rated enclosures. NEMA is an acronym for National Electrical Manufacturers Association and this organization specifies design criteria for electrical enclosures and their sealing abilities. Rather than just run wires to and from various devices, we choose to design our products to resist the rigors of your application by utilizing these enclosures on our products and eliminate the maintenance issues related to moisture intrusion in electrical systems which do not use these methods.
